10:00 - 12:00 - FSDI 103 Session #1 Cohort 29

Start working with Github desktop:

- Download and install github desktop (https://desktop.github.com/)
- Create a repository on Github.com, add a readme file and the description.
- Clone the repository on my computer using github desktop.
- Open with VSC using github desktop.

Install the extension JavaScript ES6 (in visual studio code).

Creating variables using: var (not a best practice), let and const.

Const cannot change the values during the program.

Commiting and pushing the new version in the Github repo.
